## Wednesday Challenge Form

Group Members: team 2

Problem Statement: This time we were supposed to take pvc pipes that were cut in half for each person in our team which was a half of the class. Then, each person is supposed to use the pipes to get a marble into a bag from around 20 feet.

Approach: At first we tried to wing it but we failed many times. Then, we started to get the marble from going too fast so that it was easier to get it all the way. In the end we only got the 1 marble in.

Solution: In the end we had to cooperate and have better teamwork. It was really just that simple.

Lessons Learned: we learned that we should Cooperate better and have better teamwork.
